---

Hi Everyone! This is the first post!

I attached a picture of my youngest son in his football uniform.

[http://cr88reunion.com/components/com\\_fireboard/uploaded/images/football01.jpg](http://cr88reunion.com/components/com_fireboard/uploaded/images/football01.jpg)

That's his "tough guy" look.

My older son is 8.

[http://cr88reunion.com/components/com\\_fireboard/uploaded/files/trophy2.jpg](http://cr88reunion.com/components/com_fireboard/uploaded/files/trophy2.jpg)

His team won the "in house" championship in baseball. He's a "tough guy" too B)

The ugly mug in my avatar is me.

I thought I would put a little more info in here than just pictures of my kids.

Life since high school:

I went to Bucks right after graduation and stayed there about a year and a half before deciding college was for the birds. I dropped out and worked full time for a landscaping company for a year or so digging holes and planting bushes and trees. I met my future wife (Joanne Gallagher from the class of 90). We dated for about 7 years before getting married in 1997.

The "working for a living" thing got old quick and I decided to give college another try with an actual goal of being an Architect (like George Costanza). Along the way I switched jobs and started driving trucks for Joanne's dad too (good money, long hours, hard ass work).

I went back to Bucks and started taking classes again in the "Engineering" curriculum. Along the way I found out there wasn't a lot of jobs in Architecture so I switched to Engineering and transferred to Drexel University. I majored in Mechanical Engineering and kinda minored in teaching (this will make you laugh if you remember me from high school). I graduated with a Bachelor's of Science in 1997 and that was one of the hardest things I ever did.

After graduation I got married. I've held a couple jobs since then. My first job out of college was a temp position working as a test engineer for Yale. I did supervised test on battery powered fork lift trucks (broke them basically). It was real fun, but the job only lasted a few months because they were moving south.

Then I got a permanent job for a company named DeLaval in Trenton that made turbomachinery (pumps, compressors and steam turbines). I worked in the service department.

2.5 years ago I left DeLaval and started work for Kingsbury in NE Philly who makes bearings for large rotating machinery. I'm a Sales Applications Engineer (half sales, half applications).

Pictured above are my 2 boys. I have so much fun with them and being a dad is great.

My hobbies include computers (programming websites like this one) and video games. I'm also involved in the boy's sports (coaching their baseball teams and helping out with football). I play softball whenever I can and used to be an avid paintball player.

I guess that's about it :D

It was you, me, Jen Ashmore and Tim Herbert in Preston's math class. We had a blast! I loved the trick where you would

---

snort a necklace and pull it through your mouth. :lol:

Keep me informed about the reunion. I keep in contact with a bunch of friends from The Rock.

I am also on facebook.

Peace Out!

Scott Mann
